

# 1) Analogical Reasoning over Natural Language Paragraphs (2022-2023)

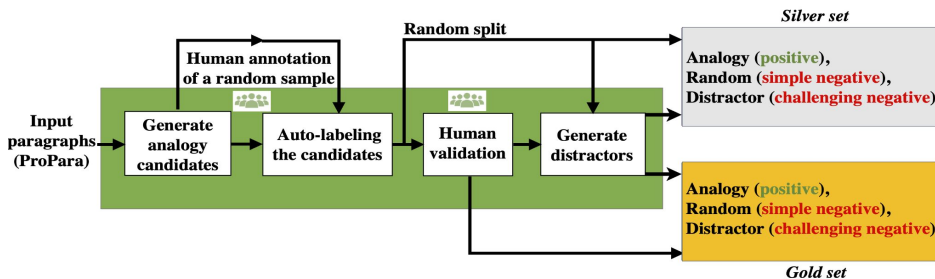

## Life is a Circus and We are the Clowns: Automatically Finding Analogies between Situations and Processes

Oren Sultan, Dafna Shahaf

## ParallelPARC: A Scalable Pipeline for Generating Natural-Language Analogies

Oren Sultan, Yonatan Bitton, Ron Yosef, Dafna Shahaf

Base	Target	Similar Relations
<b>Title:</b> How does a solar panel work? <b>Domain:</b> Engineering <b>Paragraph:</b> solar energy <i>powers</i> an electric current within a solar panel. The <b>photovoltaic cells</b> within the panel <i>convert</i> the energy from the sun into electricity. The <b>electrical wires</b> then <i>spread</i> this <b>power</b> throughout the panel. The <b>electric current</b> is then used to <i>power</i> whatever the panel is connected to.	<b>Title:</b> How does photosynthesis occur? <b>Domain:</b> Natural Science <b>Paragraph:</b> Photosynthesis occurs when <b>sunlight</b> <i>powers</i> chemical reactions within the <b>chloroplasts</b> of a plant. The <b>chloroplasts</b> are able to <i>transform</i> the energy from the <b>sunlight</b> into usable energy for the <b>plant</b> . This energy is then used to produce <b>nutrients</b> for the plant, which are then <i>distributed</i> throughout the <b>plant</b> .	(solar energy, <i>powers</i> , electric current) (sunlight, <i>powers</i> , chemical reactions)  (photovoltaic cells, <i>convert</i> , energy) (chloroplasts, <i>transform</i> , energy)  (electrical wires, <i>spread</i> , power) (plants, <i>distribute</i> , nutrients)

## LLMs versus the Halting Problem: Revisiting Program Termination Prediction

Oren Sultan, Jordi Armengol-Estapé, Pascal Kesseli, Julien Vanegue, Dafna Shahaf, Peter O'Hearn, Yossi Adi

### C code example:

```
1: typedef enum {false,true} bool;
2:
3: extern int __VERIFIER_nondet_int(void);
4:
5: int main() {
6:     int i;
7:     i = __VERIFIER_nondet_int();
8:
9:     while (i >= -5 && i <= 5) {
10:        if (i > 0) {
11:            i = i-1;
12:        }
13:        if (i < 0) {
14:            i = i+1;
15:        }
16:    }
17:
18:    return 0;
19: }
```

Verdict: Non-termination
